PINK EYE FLU DATABASE

PROJECT SCOPE

The Pink Eye Infection Database aims to provide a comprehensive system to record and manage data related to pink eye (conjunctivitis) cases. This system will cater to medical researchers, healthcare professionals, public health authorities, and patients by offering detailed information about patient demographics, clinical characteristics, etiology, diagnosis, treatment, and epidemiology of pink eye infections.

GOALS AND OBJECTIVES

- **Comprehensive Data Collection:** Gather detailed and accurate data on pink eye infections to support research, clinical practice, and public health initiatives.
- **Enhanced Clinical Decision-Making:** Provide healthcare professionals with standardized guidelines and evidence-based practices to diagnose and treat pink eye infections effectively.
- **Public Health Monitoring:** Enable health authorities to monitor outbreaks, implement preventive measures, and educate the public about pink eye prevention and treatment.
- **Patient Empowerment:** Offer reliable information to patients, allowing them to understand their condition better and make informed decisions about their eye health.

BASIC FEATURES

1. Patient Information Management:

- Store patient demographics including age, gender, and geographic location.
- Record clinical characteristics such as symptoms, duration, and severity of pink eye infections.

2. Etiology Tracking:

- Identify and record the causative agents (bacteria, viruses, allergens, irritants) of pink eye infections.

3. Diagnosis Management:

- Track diagnostic tests performed and their results.
- Store information related to different diagnostic procedures.

4. Treatment Information:

- Document treatment modalities used, including medication and treatment outcomes.

- Track the duration and effectiveness of treatments.

5. Epidemiological Data:

- Monitor incidence, prevalence, and seasonal patterns of pink eye infections.
- Identify and record risk factors associated with the infection.

GUI FEATURES

User Authentication:

- Secure login for different user roles (researchers, healthcare professionals, public health authorities, patients).

Data Entry Forms:

- Intuitive forms for entering patient details, infection characteristics, diagnostic information, and treatment details.
- Forms for recording and updating etiology and epidemiological data.

Search and Filter Options:

- Ability to search and filter records based on various criteria such as patient demographics, symptoms, etiology, diagnosis, and treatment outcomes.

Reporting and Analytics:

- Generate reports on patient statistics, treatment efficacy, and epidemiological trends.
- Visual analytics tools for data visualization (graphs, charts, etc.).

Data Security and Privacy:

- Ensure data privacy and security by implementing access controls and encryption.
- Compliance with healthcare regulations regarding patient data confidentiality.

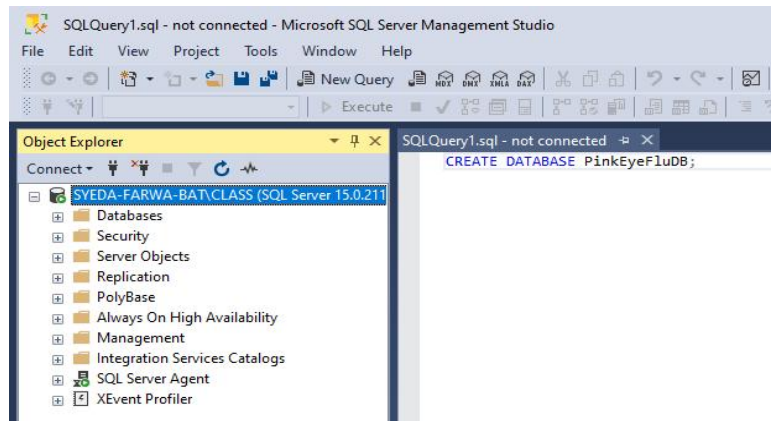

Relationship Management:

- Interface to manage relationships between patients, infections, diagnoses, treatments, and physicians.
- Visual representation of relationships (ER diagrams) within the GUI for better understanding.

Integration with External Systems:

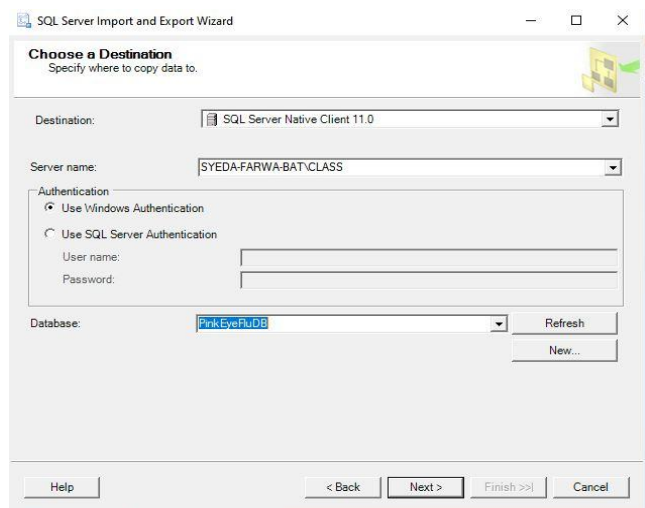

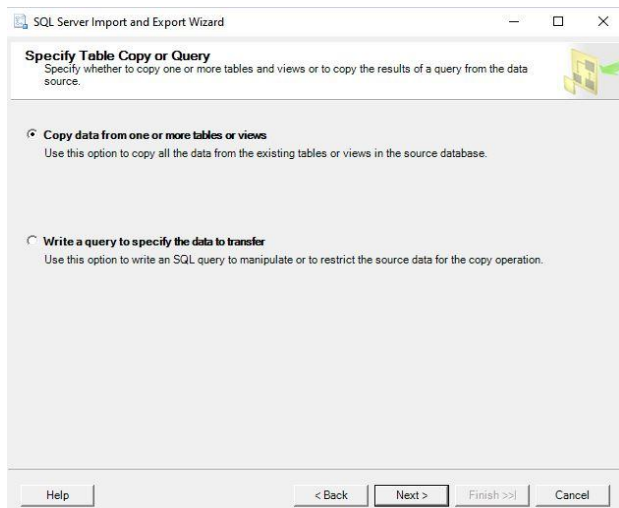

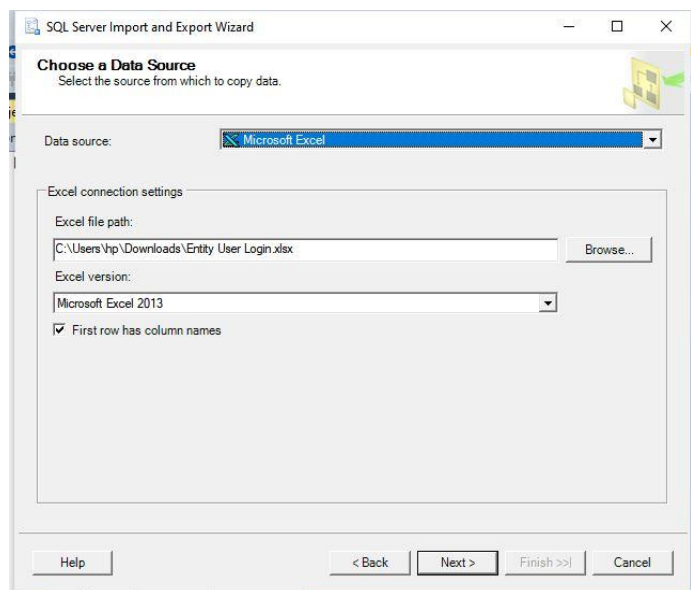

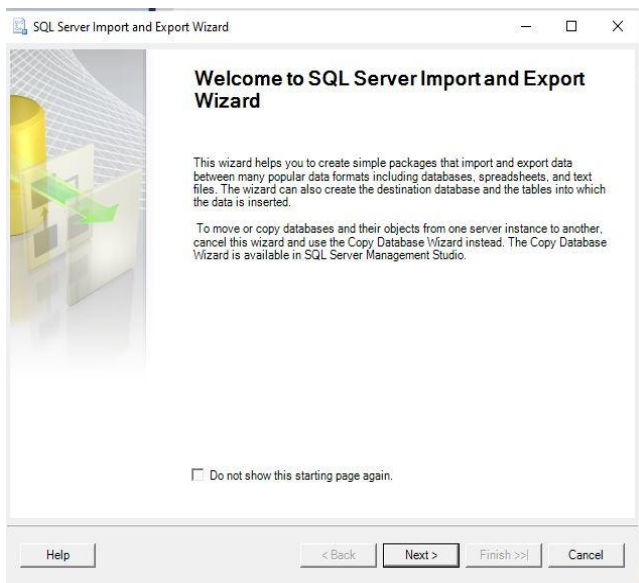

- Interfaces to interact with other systems such as the course catalog, financial aid, and billing systems.

CREATING DATABASE

CREATING TABLES AND IMPORTING DATA INTO TABLES THROUGH EXCEL

1. USER LOGIN TABLE :

SQL Server Import and Export Wizard

Select Source Tables and Views
Choose one or more tables and views to copy.

Tables and views:

<input checked="" type="checkbox"/> Source: C:\Users\hp\Downloads\Entity User Login.xlsx	Destination: SYEDA-FARWA-BAT\CLASS
<input checked="" type="checkbox"/> 'Sheet1\$'	[dbo].[Sheet1\$]

Edit Mappings... Preview...

Help < Back Next > Finish >> Cancel

SQL Server Import and Export Wizard

Save and Run Package
Indicate whether to save the SSIS package.

☒ Run immediately

☐ Save SSIS Package

SQL Server
File system

Package protection level:
Encrypt sensitive data with user key

Password:

Retype password:

Help < Back Next > Finish >> Cancel

SQL Server Import and Export Wizard

Complete the Wizard
Verify the choices made in the wizard and click Finish.

Click Finish to perform the following actions:

Source Location : C:\Users\hp\Downloads\Entity User Login.xlsx
Source Provider : Microsoft.ACE.OLEDB.15.0
Destination Location : SYEDA-FARWA-BAT\CLASS
Destination Provider : SQLNCLI11

- Copy rows from 'Sheet1\$' to [dbo].[Sheet1\$]
The new target table will be created.
- The package will not be saved.
- The package will be run immediately.

Provider mapping file : C:\Program Files (x86)\Microsoft SQL Server Management Studio 19\Common7\IDE\Extensions\Microsoft\SSIS\160\MappingFiles\JetToMSSql9.xml

Help < Back Next > Finish Cancel

Close

And the table “ User login” is created :

SQLQuery30.sql ---FARWA-BAT\hp (55))

```
SELECT TOP (1000) [userID]
      , [username]
      , [password]
FROM [Project].[dbo].[Userlogin]
```

100 % Results Messages

	userID	username	password
1	655	user1	password1
2	656	user2	password2
3	657	user3	password3
4	658	user4	password4
5	659	user5	password5
6	660	user6	password6
7	661	user7	password7
8	662	user8	password8
9	663	user9	password9
10	664	user10	password10
11	665	user11	password11

Query executed successfully.

2. **PATIENT TABLE** : Starting steps are same as above. By doing above steps, table is created :

SQLQuery39.sql -...FARWA-BAT\hp (64)) X SQLQuery38.sql -...FAR

```
SELECT TOP (1000) [PatientID]
      ,[Age]
      ,[Gender]
      ,[Contact]
      ,[Address]
FROM [Project].[dbo].[Patients]
```

100 %

Results Messages

	PatientID	Age	Gender	Contact	Address
1	301	72	Female	Contact301	Address301
2	302	74	Male	Contact302	Address302
3	303	57	Male	Contact303	Address303
4	304	80	Male	Contact304	Address304
5	305	37	Female	Contact305	Address305
6	306	27	Female	Contact306	Address306
7	307	45	Male	Contact307	Address307
8	308	2	Male	Contact308	Address308
9	309	61	Female	Contact309	Address309
10	310	2	Male	Contact310	Address310
11	311	36	Female	Contact311	Address311

Query executed successfully.

3. **PINKEYEINFECTION TABLE** :

SQLQuery32.sql -...FARWA-BAT\hp (66)) X

```
SELECT TOP (1000) [infectionID]
      ,[Symptoms]
      ,[Severity]
      ,[Duration]
FROM [Project].[dbo].[pinkeyeinfection]
```

100 %

Results Messages

	infectionID	Symptoms	Severity	Duration
1	1	Swelling	Severe	2

NORMALIZATION AND FUNCTIONAL DEPENDENCY

We have normalized our tables and also found the functional dependencies of these tables, we have uploaded that assignment on Google Classroom.

PRIMARY AND FOREIGN KEY THROUGH QUERIES

1- Pinkeyeinfection:

```
SQLQuery1.sql - S...FARWA-BAT\hp (57))* ✕  
ALTER TABLE pinkeyeinfection  
ADD CONSTRAINT PK_pinkeyeinfection PRIMARY KEY (infectionID);
```

2- Patient:

```
SQLQuery3.sql - S...FARWA-BAT\hp (58)) SQLQuery1.sql - S...FARWA-BAT\hp (57))* ✕  
ALTER TABLE Patients  
ADD CONSTRAINT PK_Patients PRIMARY KEY (PatientID);
```

3- Treatment:

```
SQLQuery3.sql - S...FARWA-BAT\hp (58)) SQLQuery1.sql - S...FARWA-BAT\hp (57))* ✕  
ALTER TABLE treatment  
ADD CONSTRAINT PK_treatment PRIMARY KEY (treatmentID);
```

```
SQLQuery3.sql - S...FARWA-BAT\hp (58)) SQLQuery1.sql - S...FARWA-BAT\hp (57))*  
ALTER TABLE treatment  
ADD CONSTRAINT FK_treatment_pinkeyeinfection  
FOREIGN KEY (infectionID) REFERENCES Pinkeyeinfection(infectionI
```

100 %

Commands completed successfully.

Completion time: 2024-06-15T14:38:40.1275495+05:00

The screenshot shows a SQL Server Enterprise Manager window with two tabs: 'SQLQuery3.sql - S...FARWA-BAT\hp (58))' and 'SQLQuery1.sql - S...FARWA-BAT\hp (57))*'. The active tab contains the following SQL command:

```
ALTER TABLE treatment
ADD CONSTRAINT FK_treatment_physician
FOREIGN KEY (physicianID) REFERENCES physician(physicianID);
```

Below the command editor, the 'Messages' pane shows the following output:

```
Commands completed successfully.
Completion time: 2024-06-15T14:39:54.2513955+05:00
```

4- Physician:

The screenshot shows a SQL Server Enterprise Manager window with two tabs: 'SQLQuery3.sql - S...FARWA-BAT\hp (58))' and 'SQLQuery1.sql - S...FARWA-BAT\hp (57))*'. The active tab contains the following SQL command:

```
ALTER TABLE physician
ADD CONSTRAINT PK_physician PRIMARY KEY (physicianID);
```

5- User login:

The screenshot shows a SQL Server Enterprise Manager window with two tabs: 'SQLQuery3.sql - S...FARWA-BAT\hp (58))' and 'SQLQuery1.sql - S...FARWA-BAT\hp (57))*'. The active tab contains the following SQL command:

```
ALTER TABLE Userlogin
ADD CONSTRAINT PK_Userlogin PRIMARY KEY (userID);
```

6- Diagnosis:

The screenshot shows a SQL Server Enterprise Manager window with two tabs: 'SQLQuery3.sql - S...FARWA-BAT\hp (58))' and 'SQLQuery1.sql - S...FARWA-BAT\hp (57))*'. The active tab contains the following SQL command:

```
ALTER TABLE diagnosis
ADD CONSTRAINT PK_diagnosis PRIMARY KEY (testID);
```

SQLQuery3.sql - S...FARWA-BAT\hp (58)) SQLQuery1.sql - S...FARWA-BAT\hp (57))*

```
ALTER TABLE diagnosis
ADD CONSTRAINT FK_diagnosis_pinkeyeinfection
FOREIGN KEY (infectionID) REFERENCES Pinkeyeinfection(infectionID);
```

SQLQuery3.sql - S...FARWA-BAT\hp (58)) SQLQuery1.sql - S...FARWA-BAT\hp (57))*

```
ALTER TABLE Etiology
ADD CONSTRAINT FK_Etiology_Cause
FOREIGN KEY (causeType) REFERENCES Cause(causeType);
```

100 %

Messages

Commands completed successfully.

Completion time: 2024-06-15T14:44:42.7090282+05:00

8- Cause:

```
ALTER TABLE Cause
ADD CONSTRAINT PK_Cause PRIMARY KEY (causeType);
```

9- Assigned:

The screenshot shows a SQL query editor window with a toolbar at the top. The query being executed is:

```
ALTER TABLE Assigned  
ADD CONSTRAINT FK_Assigned_pinkeyeinfection  
FOREIGN KEY (infectionID) REFERENCES Pinkeyeinfection(infectionID);
```

Below the query editor, a "Messages" pane displays the execution results:

```
Commands completed successfully.  
  
Completion time: 2024-06-15T14:03:38.9994449+05:00
```
